

Knowing these symptoms can save your life

Meningococcal Disease will kill within hours if not diagnosed and treated quickly

Early signs of Meningococcal Septicemia are similar to those of the flu, however a person with meningococcal septicemia will usually get sicker and deteriorate much more rapidly than someone suffering from the flu.

Swift treatment makes all the difference

Between them, they are missing 12 fingers and 8 toes. One has major growth platelet damage, the other massive body scarring and the loss of a lower leg muscle.

"Working with all Australians in the fight against Meningococcal Disease"
